

(comparable to Thermage)

Prestige Rf is a non-invasive aesthetic device for reducing wrinkles and tightening loose skin, contouring the face and body and smoothing the orange peel, dimpled skin appearance caused by cellulite.

The treatment is pain free, safe and works on all skin types and skin color. There is no down time needed for post treatment healing. Treatments do not require anesthetics.

Radio frequency is an innovative technology that heats tissue from the inside out. No heat is applied at the skin surface. The skin surface warms as heat radiates upwards from the deeper treated tissue where fat and cellulite is found. When dermal tissue is heated to the correct temperature, the fat molecule breaks down and can drain out of the swollen fat cells. The same heat also shrinks existing collagen and elastin, producing immediate skin tightening and stimulates the body to produce new collagen to help reduce wrinkles and loose skin.

Gregory W. Childrey, M.D.

## PRESTIGE RF

A Safe,  
Pain free, Non-Surgical  
Solution for

Skin Tightening  
Wrinkle Reduction  
Face and Body  
Contouring  
Smooths Cellulite

Skin texture and tightness are improved from the very first treatment. Cellulite smoothing and new collagen production results require a series of 4 treatments. The first 3 treatments will be in one week span, followed by the last treatment in 3 weeks. By the last treatment you will see eye catching results. Remember that new collagen production takes the body about 2-3 months before final results are seen.

Treatment sessions vary depending on size of area anywhere between 20- 60 minutes.

Once your desired results are achieved, plan on a short maintenance series every 6 months. This time interval will depend on the healthy lifestyle choices you make to maintain your new change.
